Language: English

ISBN-10: 0316034436

ISBN-13: 978-0316034432

Product Dimensions: 7.5 x 0.4 x 10 inches

Shipping Weight: 10.4 ounces (View shipping rates and policies)

Average Customer Review: 4.5 out of 5 stars [See all reviews](#) (24 customer reviews)

Best Sellers Rank: #168,807 in Books (See Top 100 in Books) #58 in [Books > Children's Books > Activities, Crafts & Games > Games > Questions & Answers](#) #114 in [Books > Children's Books > Education & Reference > Science Studies > Anatomy & Physiology](#) #116 in [Books > Children's Books > Education & Reference > Science Studies > Biology](#)

Age Range: 8 - 12 years

Grade Level: 4 and up

Customer Reviews

Blood and Guts is a nifty little book designed to teach kids about the workings of the human body while having fun doing it. Making learning fun is what the Brown Paper School project is all about; a group of California teachers, writers, and artists came together periodically to put together an impressive number of educational books for children, working on the principle "Accept no substitutes for fun." Linda Allison wrote and illustrated this particular book herself, and it does indeed live up to its subtitle *A Working Guide to Your Own Insides*. The primary beneficiaries of the book are older children, but in a strong sense she seemed to be writing for both children and their parents; a number of the experiments she includes in these pages really need the supervision and help of an adult, and this makes for a wonderful way for parents to take an active role in their child's education and intellectual development. The book is organized very well, as the author devotes a chapter to each of the following topics: skin, bones, teeth, muscles, heart, lungs, cells, digestion,

kidneys, eyes, ears, balance, brain and nervous system, and reproduction. She provides a basic but quite informative narrative for each subject at hand, includes a number of helpful illustrations, and lays out a number of experiments by which kids can see and learn about the individual subjects themselves. Many of these experiments are very simple and can be performed quickly and easily, while others call for a few supplies that necessitate adult involvement - some of these can be dangerous, such as several different kinds of acid. The book also suggests the acquisition and minor dissection of things like hearts and kidneys, but that probably goes a little farther than most parents will want to go.
